

Midterm Lab Task 4
Using Dictionary Collections

Problem 1. Create the following UI for menu items: then allow the user to input orders

```
----- MENU -----
pizza      : $3.00
nachos     : $4.50
popcorn    : $6.00
fries      : $2.50
chips      : $1.00
pretzel    : $3.50
soda       : $3.00
lemonade   : $4.25
-----
Select an item (q to quit): pizza
Select an item (q to quit): soda
Select an item (q to quit): q
----- YOUR ORDER -----
pizza soda
Total is: $6.00

Process finished with exit code 0
```

The user will continue to input orders until q is typed to quit. Then display the summary of orders with the total bill.

1. Use a dictionary(for the menu) and List(for the orders in the cart)
2. Users may input the same item in the cart.
3. Follow the exact format and whitespace for the menu
4. User input should be case insensitive
5. If the user inputted an item not in the Menu – it will not include it in the cart and display “Not Available” and input another item
6. Create a MENU with 10 items and assign prices in Peso (php) - You may choose what items you would like to put in your cart

Code:

```
items = []

def menu():
    while True:
        print("\nWelcome to 700P ProgramCart")
        print("1 - Add Items")
        print("2 - Search for an Item")
        print("3 - Remove an Item")
        print("4 - View all items")
        print("0 - Exit program")

        choice = input("Enter choice [0 to quit]: ")

        if choice == "1":
            while True:
                newItem = input("Enter item to add (or 'x' to stop): ").upper()
                if newItem == "X":
                    break
                items.append(newItem)
                print("Items added successfully.")

        elif choice == "2":
            search = input("Enter item to search: ").upper()
            count = items.count(search)
            if count > 0:
                print("-----")
                print(f"Item '{search}' found {count} time(s) in the list.")
                print("-----")
            else:
                print(f"Item '{search}' not found.")

        elif choice == "3":
            remove = input("Enter item to remove: ").upper()
            if remove in items:
                items.remove(remove)
                print(f"Item '{remove}' found and deleted.")
            else:
                print(f"Item '{remove}' not found - deletion unsuccessful.")

        elif choice == "4":
            if len(items) == 0:
                print("The list is empty.")
            else:
                print("\n--- Items in the List ---")
                for i, item in enumerate(items, 1):
                    print(f"{i}. {item}")

        elif choice == "0":
            print("Exiting program... Goodbye!")
            break

        else:
            print("Invalid choice, try again.")

menu()
```
