

Midterm Task 5
Creating Class and Instantiating Objects in Python

Problem 1. Users in Social Media

a. Create User Class with the ff: attributes (Use Constructor for this)

- first_name
- last_name
- followers_count
- friends_name [LIST]

Note: You can make a List an attribute of a class

b. Create the ff: methods

- introduce_self – which should output " Hi I am {first_name} {last_name}
- view_full_profile – which outputs all the information of the user as shown below

Profile Name is Bradd Pitt with 10 followers.
 Friend are... Juan Pedro Jose

c. Create a separate TestUser class to test if the program is working as expected, allowing for user input to be passed as parameters of the object. Create atleast 2 object instance to test the class template

Sample Output 1:

Insert a Record?[y/n]:y

First Name: Bradd
 Last Name: Pitt
 Followers:10
 Friends:
Juan
Pedro
Jose

Insert a Record?[y/n]:y

First Name: Tom
 Last Name: Cruise
 Followers:100
 Friends:
Juan
Pedro
Jose

Insert a Record?[y/n]:n

Here are the Records....

Hi I am Bradd Pitt
 Profile Name is: Bradd Pitt with 10 followers
 Your friends are: Juan Pedro Jose

Hi I am Tom Cruise
 Profile Name is: Tom Cruise with 100 followers
 Your friends are: Juan Pedro Jose

There are currently 2 Members in the Social Media page

Rubric:

1. Completeness of the code requirements – 10
2. Correctness of the expected input and output - 10
3. Use of proper naming conventions – 5

Code:

```
#User class
class User:
    def __init__(self, first_name, last_name, followers_count, friends_name):
        self.first_name = first_name
        self.last_name = last_name
        self.followers_count = followers_count
        self.friends_name = friends_name

    def introduce_self(self):
        print(f"Hi I am {self.first_name} {self.last_name}")

    def view_full_profile(self):
        print(f"Profile Name is: {self.first_name} {self.last_name} with {self.followers_count} followers")
        print("Your friends are:", ' '.join(self.friends_name))
        print()

#TestUser class
class TestUser:
    def __init__(self):
        self.user_list = []

    def add_user(self):
        while True:
            insert = input("Insert a Record? [y/n]: ").lower()
            if insert == 'n':
                break

            first_name = input("First Name: ")
            last_name = input("Last Name: ")
            followers = int(input("Followers: "))

            print("Friends:")
            friends = []
            for i in range(3):
                friend = input()
                friends.append(friend)

            # Create a new User object
            user = User(first_name, last_name, followers, friends)
            self.user_list.append(user)

    def show_records(self):
        print("\nHere are the Records...\n")
        for user in self.user_list:
            user.introduce_self()
            user.view_full_profile()

        print(f"There are currently {len(self.user_list)} Members in the Social Media page")

#Main Program
test = TestUser()
test.add_user()
test.show_records()
```
